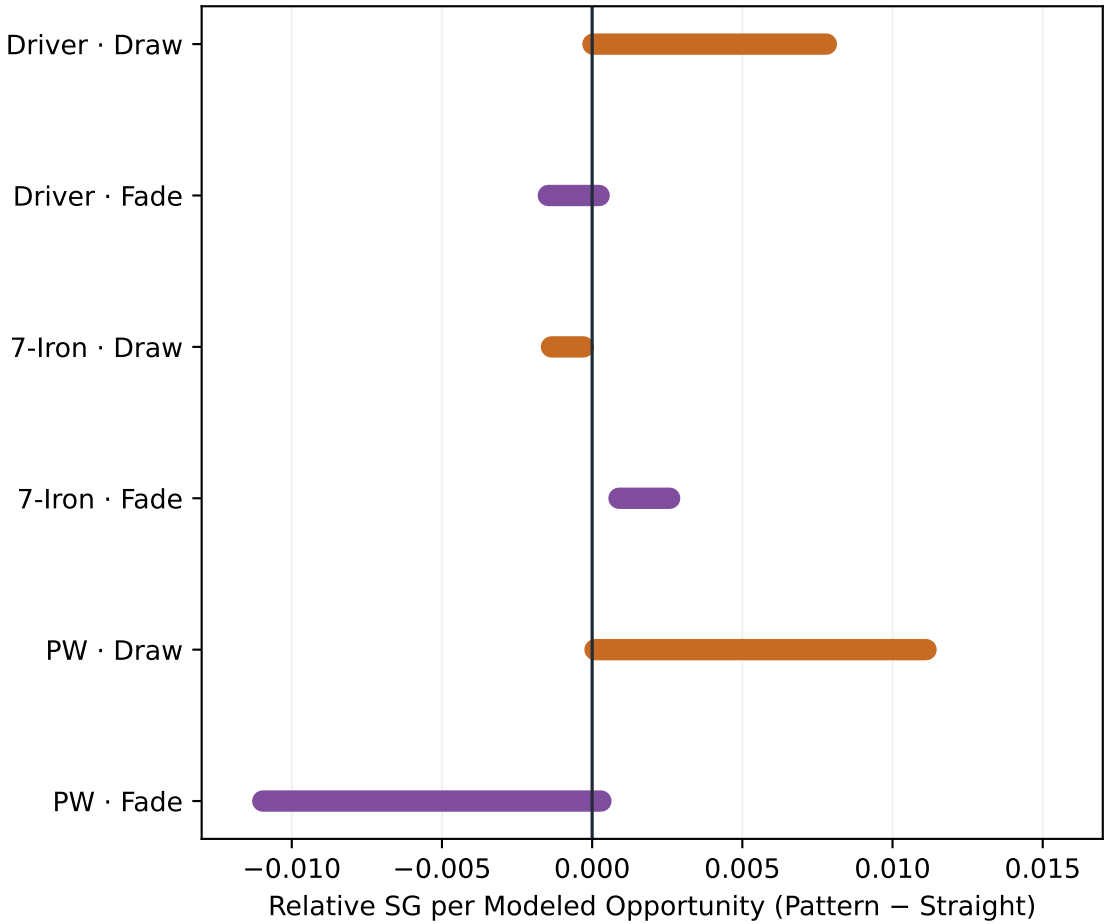
No Universal Winning Shot Shape

Selected Relative Scoring Ranges

Minimum–Maximum Across Eight Selected Zero-Lean Conditions



Distance Varies With Shape and Club. Closure Lowers Loft Here; carry direction depends on the full impact and flight response.

Relative SG effects are small and conditional on the scoring model. Straight is each cell's zero reference.

These ranges are not pooled intervals or per-round gains.

Source: Selected relative-SG table; carry only; assumed lies and historical benchmark. See numerical results for paired intervals.
